Carbon Reduction Plan v1.1

Supplier Name Community Assessment Therapy Services LTD (14973299)

Publication Date 30.05.2025

Updated: 30.05.2026

Commitment to achieving Net Zero

Community Assessment Therapy Services LTD 14973299 is committed to achieving NET Zero emissions by 2050.

Baseline Emissions 2024

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Scope 1 Biomass fuel is provided for our clinic rooms at Earsham Hall, for which we are not charged. We do not own a vehicle fleet, and do not transport raw materials. We no longer use Peartree Barn for clinics.

Scope 2 Electricity is used at Earsham Hall whilst clinics are running. Everything is switched off when the clinic rooms are not in use. Earsham Hall unit 3 was rented in July 2024, and unit 2 was rented in September 2024, so there is no full-year data for these units. Full year data was used for 2025.

Scope 3 CATS have included carbon emissions from scope 3: business travel for our directors in their personal cars only. We are unable to provide carbon emissions for the remaining 4 compulsory Scope 3 Emissions: upstream transportation & distribution, employee commuting, waste and downstream transportation & distribution. The directors submit monthly mileage for their business travel. To calculate the CO2e KG, this figure was then multiplied by the relevant emission factor based on the year and emission type (hybrid car

used for travelling to school observations. Other business travel is kept to a minimum with the use of Teams for virtual meetings.

Upstream transportation & distribution

We have limited supplies for our clinical work delivered; most of our standardised assessments are electronic and are not couriered to us. One assessment is delivered annually.

Employee Commuting

We only employ 3 directors. Their mileage is submitted under business travel. Other associates may travel for work, but this is not captured; however, they have a personal hybrid & electric car.

Waste

We produce minimal waste within our clinic venues. We are paper-light, any paper records are scanned and held electronically. Our paper records are disposed of by a shredding company that bale up the shredded documents and sends to a paper mill for recycling. We do not have access to their carbon emissions, but their environmental statement informs us that they are committed to using electric vehicles.

Downstream transportation & distribution

This is not applicable to CATS as we do not manufacture or distribute products.

2024 Baseline Emissions	
EMISSIONS	Total (kg CO2e)
Scope 1	0
Scope 2	0.1
Scope 3	3.1
Total Emissions	3.4

Emission reduction targets

To progress to achieving Net Zero, we have adopted the following carbon reduction targets for 2026.

- Continue work towards being a paper-free company. Clinicians are to take notes electronically and upload rather than using paper to be scanned.
- We will review our business processes regularly to identify areas that can be made more environmentally friendly and reduce their carbon impact on the environment.
- We will update our carbon footprint annually.
